

INFOCYTE + PAGERDUTY INTEGRATION

Send Critical Security Alerts via the InfocYTE-PagerDuty Integration

Integrating between InfocYTE and PagerDuty is simple and effective by leveraging a **Service** created in PagerDuty and a **Webhook** configured in InfocYTE. The integration between the two platforms leverages an Integration with the PagerDuty **Service** where an API Integration is created (PagerDuty Events API v2) and a defined **Webhook** with the InfocYTE Platform where the **Webhook** calls out to the PagerDuty API for Events and sends the alert payload to initiate an event in PagerDuty.

INTEGRATION VALUE:

Reduce Security Alert Fatigue

InfocYTE is tuned to reduce false positives and false negatives, helping security teams focus on detecting and responding to real threats.

Detect Advanced Threats

Leverage live memory forensics, historical analysis, and continuous monitoring to detect file-less malware and sophisticated threats.

Respond Faster at Scale

Extensible IR options help security teams perform deep forensic analysis, isolate hosts, and automate incident response at scale.
